

The 007786 scans for valid object data:

- Object (sprite) code,
- palette,
- position and
- attributes

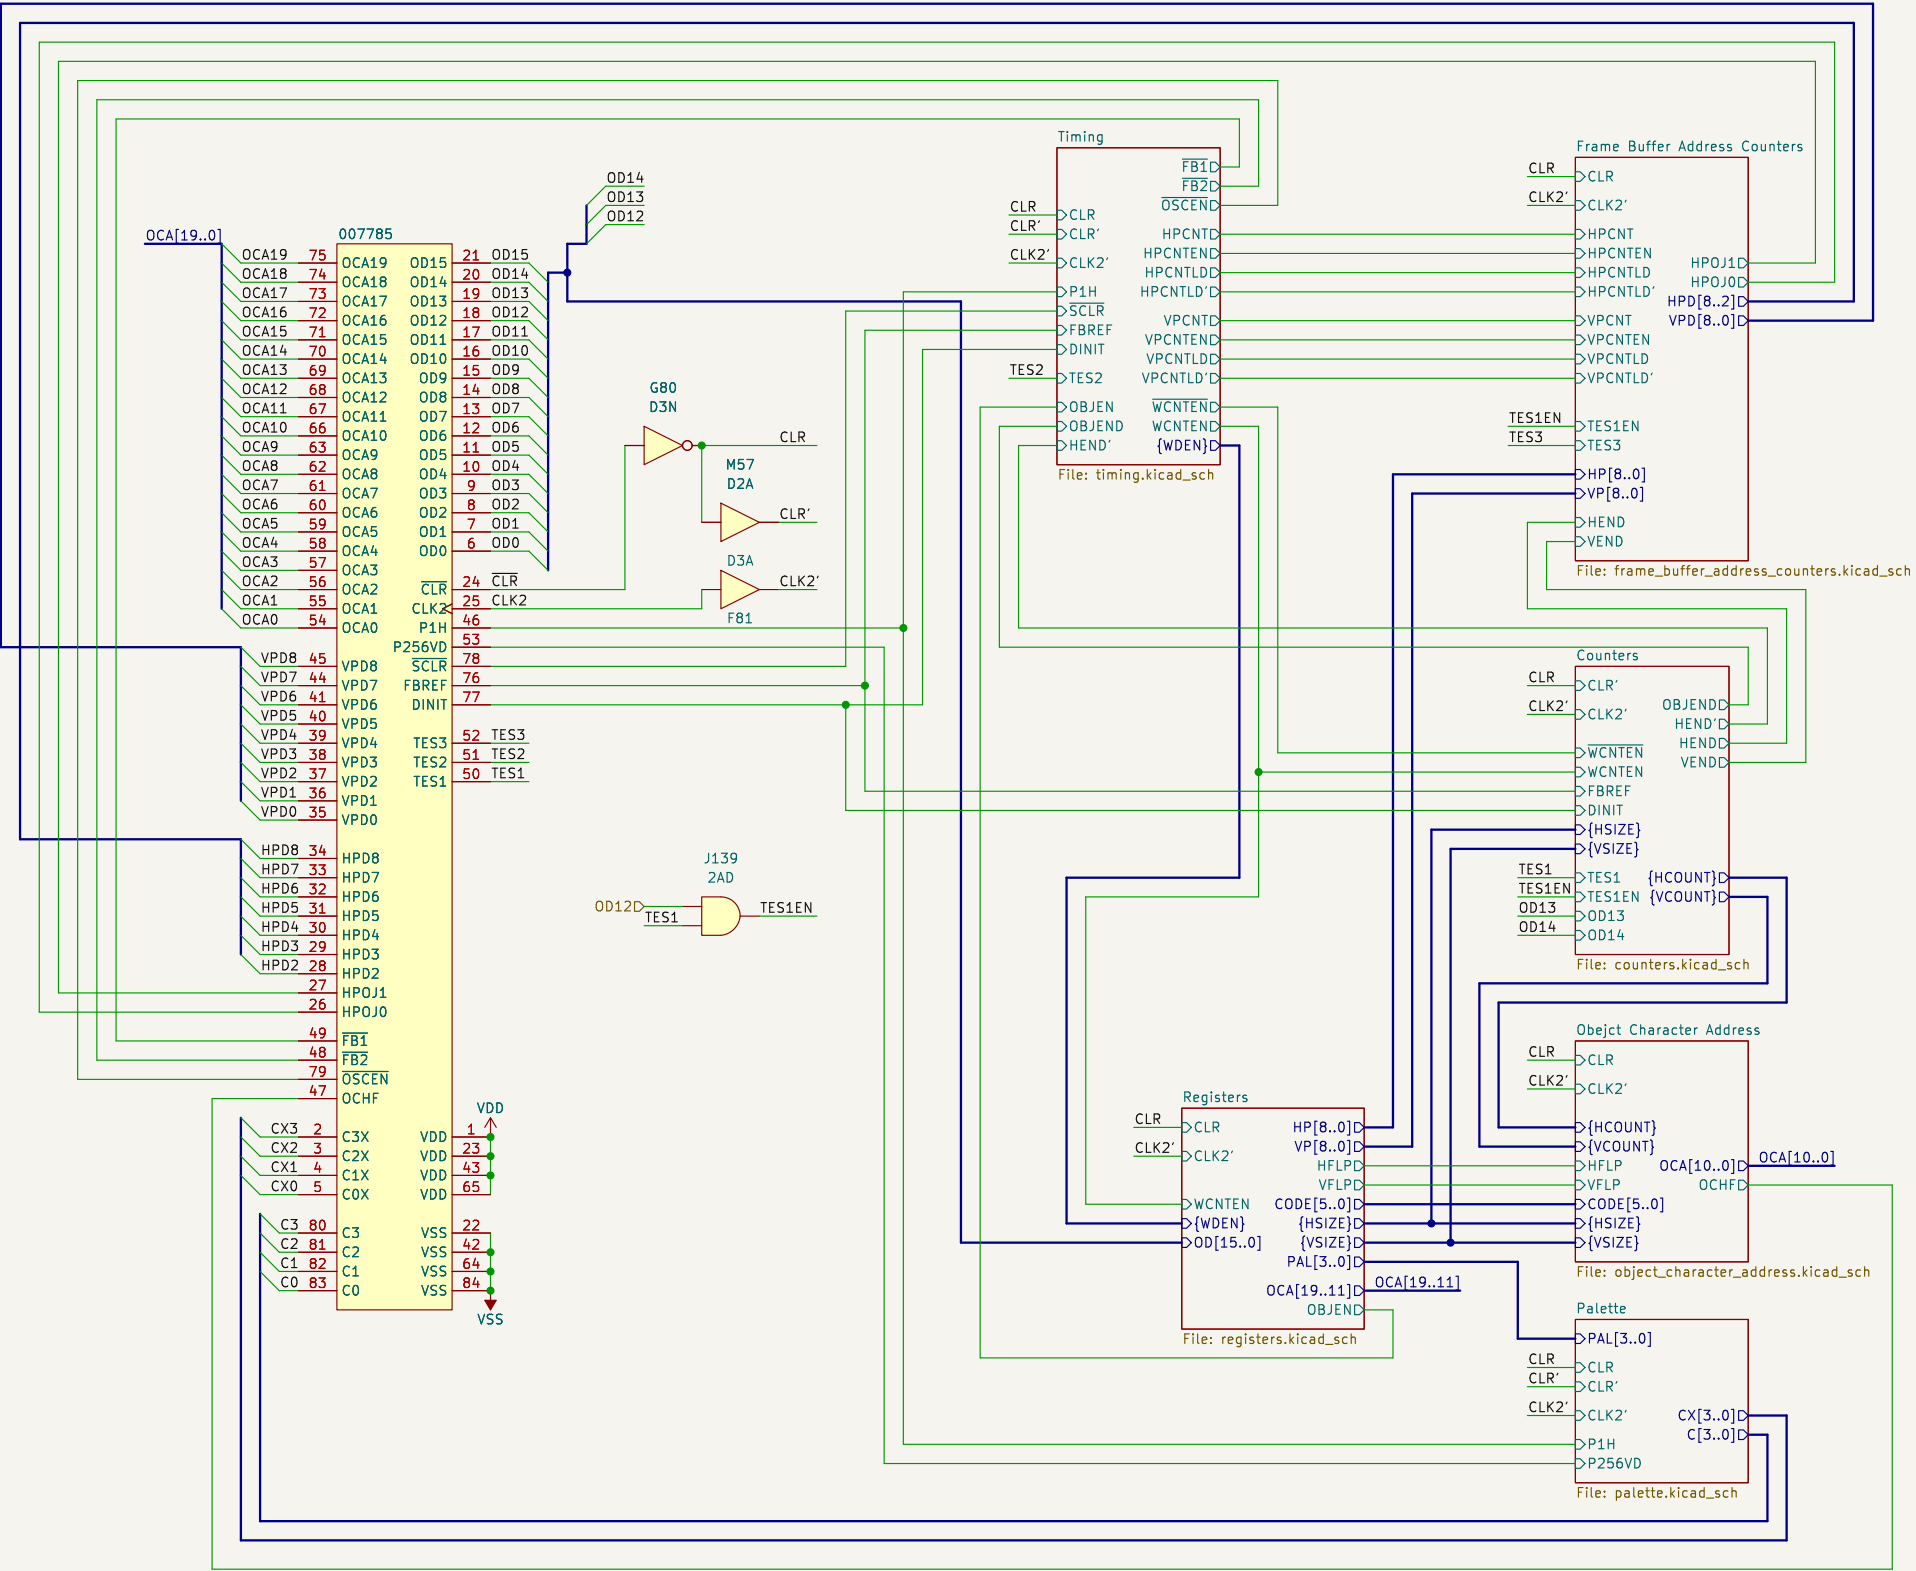

It translates it into:

- Individual object character (tiles) color code,
- Palette values
- object character address

This is copied into the frame buffers with the 007786.

1. SCLR (OSCANCLR) starts the obejct scanning process.
2. OSCEN is activated when each of the four words to be scanned are to be read. The 007783 increments the address.

The 007786 uses an OKI 79V000 gate cell array with 3289 unit cells.

0	0	0	0	0	16	0	1	0	11	128H64V	8192
0	0	0	0	0	16	0	1	1	12	16H128V	2048
0	0	0	0	0	16	0	1	0	13	32H128V	4096
0	0	0	0	0	16	0	1	1	14	64H128V	8192
0	0	0	0	0	16	0	1	0	15	128H128V	16384

Logic Schematic:

The schematic shows the implementation of the object character select address. It includes a truth table, a logic diagram with various gates (AND, OR, NOT, XOR, MUX), and a register (V90 DFR) for the HFLPD signal. The output is OCA[10..0].
